After-LIFE

UNTIL NOW

The project partners have contacted companies interested in the technology through a new questionnaire available on the website and publicised on the project's social networks, in order to scale up the second treatment replication study for processing.

At the moment, this second replication study is being developed with the San Miguel beer company in Spain.

The Layman report is being prepared, which summarises the important data of the project, from the actions carried out to the objectives achieved. It will be available online for download on the project website.

The After-LIFE plan, which includes the communication strategy of the project after its completion, has also been drafted and is mainly based on a continuous dissemination of the project results and on the promotion of its replicability among potential stakeholders, already identified and contacted throughout the project.

The dissemination of the project has been established mainly through the following channels, which will remain active until 5 years after the end of the project:

- ⇒ Website
- ⇒ Social media
- ⇒ Promotional material
- ⇒ Events, congresses, workshops
- ⇒ Publications

It also includes the follow-up of technical activities. The pilot plant will continue to operate at HUERCASA thus serving as a showcase for interested parties. CARTIF and HUERCASA will provide the necessary staff for the operation and supervision of this demonstration system after the end of the project.

The promotional video of the Project has been launched! It is available on the Youtube account.

The whole ALGAECAN team hopes you like it.

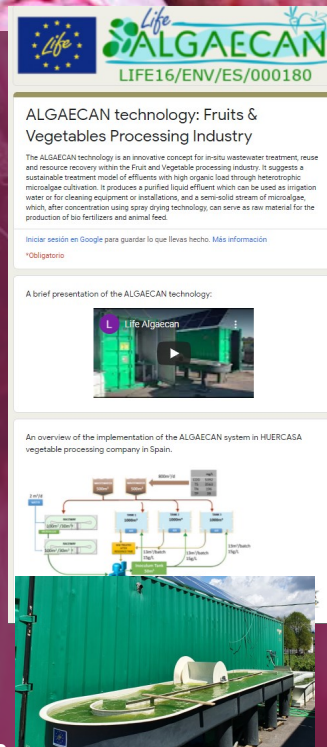

The project has continued to be presented at relevant online events such as the Circular Economy Week (SEC) at the School of Agriculture of the Polytechnic Institute of Bragança, which brought together a set of initiatives developed within the scope of the POCTEP Circular Labs project.

THE NEXT

Further presentations of the project and contact with stakeholders will be made.

Documents developed during the project will be made public for download.

Availability of the Layman report and the After-LIFE plan.
